

## Bridge with pendulum

Can be used for any ability level.

Another version of a plum line. To assist with line up and aiming issues.

An invention from Greenacres Curling Rink

A clever use of some plumbing pipes, creating a "bridge", with a swinging pendulum created with taped piping.

The bridge can be adjusted in height so the curler can slide under and through without obstruction.

The pendulums are rigid and so easily return to their original position – unlike a swinging length of string.

Several pendulums can be used at the same time for different angles or Left/right handed curlers. This alleviates resetting the line for different individuals.
